

Splice Quick Start Guide

- Install Splice in your Applications folder and launch the application
- To add movies to the project, click the **Import Movies** toolbar icon or drag the desired movies from the Finder onto the Splice document window.
- Arrange the movies as you would like using drag and drop between table entries.
- To set the portion of the movie to be included in the output, adjust the time range slider below the preview of the selected movie.
- Once the clips are ordered as desired, click the **Export** icon on the toolbar to create a single clip containing all of your movies. To monitor the progress of the movie export, click the **Activity Monitor** icon on the toolbar.
- Have Fun!
