

Installation Instructions For CS6 users

Method 1 – Simple Copy and Paste

Open Photoshop and go to the top menu File, then down to Scripts, then to Browse. When the pop up appears, locate the file called Extensions.jsx in the Raya Pro 3.0 download. It is in the CS6 folder. Open this.

Some folders should appear which are all Extension folders. **Close Photoshop.** You just need to copy Raya Pro into one of these extension folders to install the panel.

To do this, go into the folder called ‘CS6 Raya Pro 3’, select all 8 folders in there, right click and choose copy.

Then choose the Extensions folder with the most number of folders already in it. Right click in that folder and choose paste. Now 8 new folders should be in your Extensions folder.

Open Photoshop now and go to the top menu Window, and down to extensions. In there you will see Raya Pro 3 Hub. Click on this and it will open Raya Pro.

Now please watch the video called How To Set Up Raya Pro for suggestions on how to organize the panel.

Method 2 – ZXP Installer

An alternative method is to download and install the Extension Manager.

Here is the download link for Extension Manager:

https://www.adobe.com/exchange/em_download/em6_download.html

Install and open Extension Manager. Then at the top of Extension Manager you will see ‘Install’. Select this, go to the CS6 Users folder, and open the file called Raya Pro 3.zxp. Now follow the instructions to install.

Make sure Photoshop is closed before you do all of that. Then open Photoshop and go to the top menu Window, and down to extensions. In there you will see Raya Pro 3 Hub. Click on this and it will open Raya Pro.

Now please watch the video called How To Set Up Raya Pro for suggestions on how to organize the panel.
